

IN THE SPECIFICATION:

Please amend the paragraph at page 5, lines 14-18 as follows:

The polyol component may consist of one or more polyols having a molecular weight (weight average) between 1,000 and 1,200 and an OH number between 20 and 112, wherein the mathematical product of the functionalities of the polyurethane-forming components is at least 5 or 6 (preferably 5.2) and the isocyanate characteristic lies between 15 and 60.
